VEGETABLES—FRESH MARKET

A 81
m 342
cop. 2

January 27, 1958

PLANTED ACREAGE OF PRINCIPAL COMMERCIAL CROPS 1956 AND 1957

The following report of the acreage planted to principal vegetable and melon crops for fresh market in major producing States for the 1956 and 1957 seasons has been prepared by the Crop Reporting Board from data furnished by crop correspondents, State statisticians and cooperating agencies. This release supplements the 1957 Annual Summary of Commercial Vegetables for Fresh Market, published December 17, 1957, which contains acreage data on a "for harvest" basis.

Acreage for harvest published in the 1957 Annual Summary includes acreage harvested or partially harvested, and mature acreage abandoned because of low prices or other economic factors. Planted acreage in this report includes in addition to acreage for harvest, acreage lost or abandoned due to natural causes and acreage abandoned prior to reaching maturity because of economic conditions. Acreage lost and replanted to the same crop early enough to be harvested in the season for which it was originally intended, is counted only once. Acreage lost and replanted to the same crop for harvest in a later season, is considered to have been planted in both seasonal classifications but is included as acreage for harvest in the second season only. Acreage lost and replanted to another vegetable crop is included as planted acreage in estimates for both crops but as acreage for harvest for the second crop only. Both planted and for harvest acreage published for strawberries includes only bearing acreage and excludes non-bearing acreage planted for harvest in a future marketing season.
